

About JCS

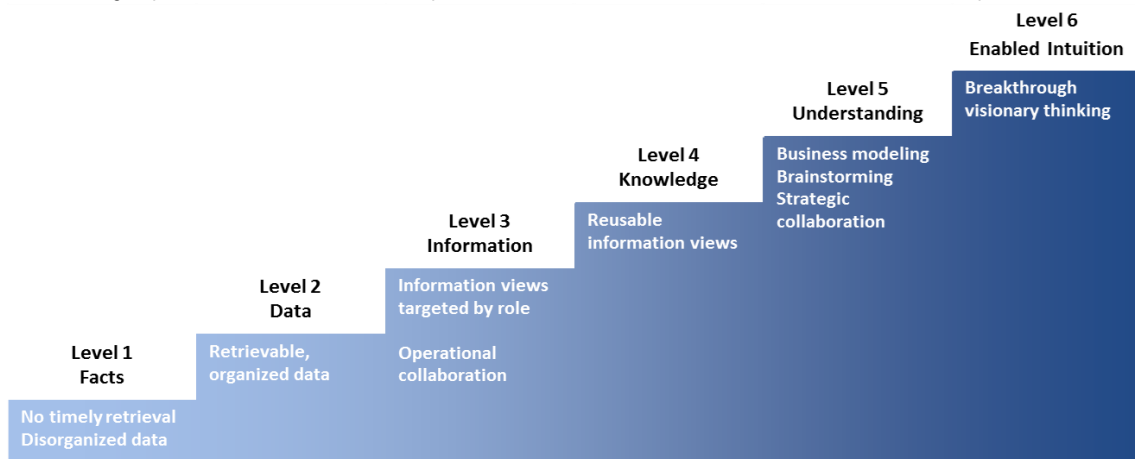

- Founded in 2003 by a former partner of Ernst & Young, LLP
- Headquartered in Scottsdale, Arizona
- Alumni of prestigious consulting firms and healthcare providers with a passion for client service
- Clients range from growing, emerging organizations to Fortune 500 clients
- Projects range from smaller, short-term engagements to large, complex implementations and enterprise-wide projects

JCS: The Intelligent Approach to Business Intelligence

You know your organization must move beyond merely sorting, sifting and reporting data to achieve “enabled intuition” and breakthrough visionary thinking

Value-based purchasing, accountable care, population management, shared savings and risk-sharing contracts with commercial payers, pay-for-performance, bundled payments: these initiatives are reshaping tomorrow’s healthcare delivery and reimbursement landscape. Successful navigation of that landscape will require you to climb the ladder of business intelligence by:

- Capturing, integrating, and properly structuring clinical, financial, and cost data within the enterprise
- Accessing and integrating those same data from external providers that deliver services across the entire continuum of care
- Enabling both clinical and business knowledge workers to access and visualize data in a manner that allows them to obtain timely answers to critical questions
- Creating and sharing a “single version of the truth” across all parts of the enterprise
- Supporting predictive and “what-if” modeling essential to strategic planning and collaboration
- Enabling experience and intuition to reshape the vision, mission, and structure of the healthcare enterprise

JCS can help you achieve the 4 key components of true BI capability

BI implementations often fail because of: a) lack of strategy; b) lack of readiness; c) lack of direction; d) lack of execution; and e) lack of impact (no perceived value.) JCS consultants have a deep understanding of the people, processes and technology at play within the healthcare enterprise. We understand that there is no “plug and play” solution – the migration from information to understanding is transformational and requires managed change and a new mindset throughout the enterprise.

JCS’ proven program and project management skills can help you design the most appropriate BI strategy for your organization, develop the proper business requirements, prepare the organization for change, and keep your BI initiative focused and on target. When you partner with JCS, we will help you achieve four key components of true BI capability that will allow you to climb the BI ladder:

- Adopt an information-driven culture
- Define and build a “BI competent” organization
- Select, acquire, and implement the right BI tools for your enterprise
- Establish a data management program that supports common enterprise understanding (a “single version of the truth”), consistent reporting, improved quality-of-care, improved decision making, and cost efficiencies

Your path to true BI competence starts with a JCS BI Assessment

JCS utilizes a well-defined, in-depth, enterprise-wide business intelligence assessment process to help clients discover, unlock, and visualize the data housed within various information silos. This assessment, which typically requires at least 12 weeks to complete, incorporates the appropriate scope, activities, and deliverables necessary to:

- Define your optimal BI strategy
- Determine the desired metrics and/or KPIs for each executive, senior-level, and mid-level business and clinical user
- Evaluate and realign your organization as necessary
- Establish structures and processes for data management, data governance, and data quality
- Identify the technology needed to support your desired BI future state

The JCS Business Intelligence Assessment

An evaluation of an organization's ability to leverage the data created during its daily operations to support the operational and strategic information needs of its leaders and knowledge workers.

Inputs	Outputs	Benefits
<ul style="list-style-type: none"> • Existing reporting & decision support capabilities • Business information requirements (Executive, clinical, operational) 	<ul style="list-style-type: none"> • A set of consolidated & prioritized business information requirements • Gap analysis • Enterprise BI roadmap 	<ul style="list-style-type: none"> • Establishes BI as a <u>program</u> (vs. a series of projects) linked to strategic business goals • Promotes the creation of an integrated enterprise BI environment and approach • Facilitates sharing of BI resources • Leverages trends in BI such as Big Data, Self-Service BI, and Advanced Analytics • Right-sizes the BI solution to the scope and capabilities of the enterprise • Maximizes the organization's ROI from business intelligence

JCS will help you complete the journey to “enabled intuition”

Today, you are being asked to do nothing less than critically examine and transform the very nature and mission of your healthcare enterprise to prepare it for success in an uncertain future. With expertise developed in major consultancies like Ernst & Young, Deloitte and Accenture and hands-on experience working with hospitals and health systems at both the strategic and tactical levels, JCS is the right partner for your BI initiative.

JCS knows how to help you leverage your people, processes, technology, and data to make more effective decisions that produce better clinical and financial outcomes. Because we deploy small teams with deep subject matter expertise, we engage smoothly and collaboratively with your executive leadership, medical leadership, and nursing leadership as well as your business, IT, and clinical knowledge workers. We will make the journey to “enabled intuition” *with you*.

The end result will be a new level of BI competence that enables your enterprise and empowers your employees at all levels:

- Better data, properly structured and not in “data silos” (data quality)
- A data governance model that aligns with and supports your business strategies and contributes significantly to quality-of-care and patient outcomes
- The ability to assemble and view clinical, financial, and cost data across the enterprise
- The ability to make data available to the right people, in the right format, at the right level of detail, and at the right time to support decision-making and predictive analysis
- Metrics that clearly demonstrate both the total cost and real value of your clinical services
- The information you need to manage the present, predict what the future may look like, and thrive... not just survive... in tomorrow's accountable care landscape
